Programs and WFLs that Purge

NOTE1 :

1. After the completion of the Biennium Closing process and from September each odd year, programmer schedules the Purge job to purge the old biennium records. It was decided to keep 3 biennium + current one on MISDB01, FASDB01. There is no fix date for each job. Programmer schedules them in the convenience of FAS and PAS.
2. Notify DBA, APC and PAS at least 3 days before you schedule the job.
3. Notify PAS and FIN driver's users the drivers may be up late on Saturday because JAMOFISPURGE needs at least 15 hours to complete the process.
4. Schedule Purge job on Friday night and after the completion of the FAS nightly process.
5. Set up the database backup job after the purge job. If the FAS process does not include the backup of database, programmer needs the backup job before and after the purge job.
 - a. JAMENCPURGE includes the Garbage Collection will finish within 3 hours
 - b. JAMFASPURGE includes the Garbage Collection will finish within 7 hours
 - c. JAMOFISPURGE includes the Garbage Collection will finish within 15 hours
 - d. Programmer contacts DBA-on call for the garbage collection problem.

NOTE2:

1. This job is used to purge the records in actual biennium crossover. See instruction on the WFL. JAM01000 is among the group of jobs in Biennium Phase1 process.
